RootBeer Summary

## Overview of Source Files

Source file count: 31
Total touches: 222
Most active contributors: Scott Alexander-Brown, Artsem Kurantsou, Matthew Rollings
Most active source file: RootBeer.java (51 touches)

Development on RootBeer, our root checker library and sample app, has picked up in recent weeks. Scott Alexander-Brown leads in terms of commits across numerous files, as well as seniority. Artsem Kurantsou and Matthew Rollings are allocated credit, as well. The figure below displays each source file and what dates after project start it has been modified or otherwise edited. The different colors indicate different authors. The most pertinent have already been outlined above.

file touches vs weeks touched

Conclusion

Development has been consistent in recent weeks. We are making good progress with our senior developer, Scott, spearheading us through these new goals we have set for ourselves. This current sprint aims to provide even greater functionality to our users, increasing retention and thus driving up sales for our product!
