Overview - Status Report

This is a report on the distribution of labor in the scottyab/rootbeer github repo. It covers who is doing the work, what is getting done, and when work takes place.

Recent Work

The most recent work has been done by Niall Scott, with one commit on October 4th 2024.
- 9 files were changed, and the intent was to clean Gradle scripts.

The most commits done in 2024 was by Artsem Kurantsou on September 9th.
- They updated APG and Gradle, facilitated the migration to Gradle KTS, updated the Gradle wrapper, and fixed the root project name, signing, and properties access.
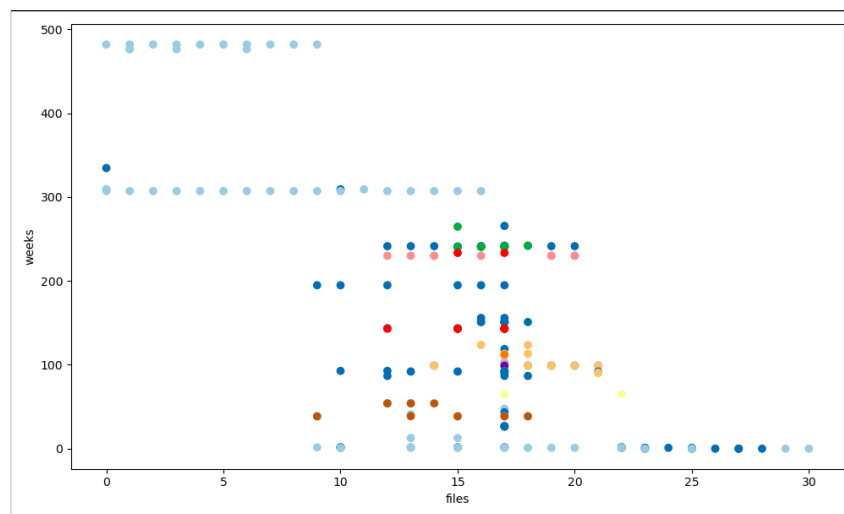

Top Contributor

The person who has the most commits is Scott Alexander-Brown, and their work has ranged from 2015 to 2024. Their last commit was on September 18th 2024.
- In 2024 they did some housekeeping in preparation for the release of 0.1.1.

Developers Who Left

A bulk of this project has been completed, in recent years the only commits have been for small bugs and updates. Some developers who may have left the project include:
- Andy barber - last commit July 1, 2016
- altvnv - last commit March 16, 2018
- Daniel Kutik - last commit January 30, 2020

weeks vs author contribution on files

Useful Git Commands

These are the git commands that jumped out at me the most.

- git checkout -b <branch_name>
- git push origin <branch_name>

I found the ability to work on a specific branch enhanced the clarity of the project by separating different tasks.
